

SyncMaster — Marketing Deliverables Master Document

Context for new conversation: SyncMaster is a curated sync licensing platform connecting African composers to global music supervisors at studios, streamers, and ad agencies. Nollywood is the early validation beachhead — not the end market. The end state is a global sync platform powered by African music.

What is already built: Strategy (4 steps), Digital Marketing Canvas (AARRR), 90-Day Roadmap, and Execution Tracker — all as an interactive HTML deck deployed on Netlify.

What this document maps: The 5 remaining layers of deliverables needed to execute the strategy.

Layer 1 — Content System

When: Before Month 1 launch (Week 0–1) **Purpose:** Turn roadmap intentions into a daily posting schedule with consistent themes and pre-written copy.

Deliverable 1.1 — Content Pillars Guide

What it is: 4–5 recurring content themes that make SyncMaster's feed coherent. Every post maps to a pillar. Prevents content from feeling random.

Format: Single markdown doc or Notion page. 1–2 hours to produce.

The 5 pillars:

Pillar	Theme	Target Persona	Tone
Education	How sync licensing works, rights explained, industry demystified	Tunde (composer)	Informative, accessible
Proof	Composer spotlights, placement announcements, producer testimonials	Both	Aspirational, credible
Culture	African music + global stages, the cultural case for African sound	Both	Proud, editorial
Behind the scenes	Founder building in public, platform updates, process transparency	Both	Personal, honest
Industry	Sync market news, commentary, global music supervisor perspectives	Amara (supervisor)	Sharp, authoritative

Pillar ratio per week (Month 1):

pie

accTitle: Content Pillar Distribution Month 1

accDescr: Shows the recommended distribution of content across the five pillars

"Education" : 35

"Proof" : 25

"Behind the scenes" : 20

"Culture" : 15

"Industry" : 5

Prompt for new conversation:

Build a Content Pillars Guide for SyncMaster – a curated sync licensing platform connecting African composers to global music supervisors. We have 5 pillars: Education, Proof, Culture, Behind the scenes, Industry. For each pillar create: pillar definition, 10 specific post topic ideas, example hook sentences for Instagram + Twitter/X + LinkedIn, and a content-type recommendation (Reel / carousel / thread / article / story). Output as a clean markdown document I can save and reference.

Deliverable 1.2 — Content Calendar (Month 1)

What it is: Week-by-week posting schedule for Days 1–30. Each post has: date, platform, pillar, topic, hook, CTA, and target persona. Build one month at a time — don't plan further ahead than you can execute.

Format: Interactive HTML tracker (checkboxes, mark as posted) or Airtable base.

Structure per entry:

Field	Example
Date	Tuesday 3 June
Platform	Instagram
Type	Carousel
Pillar	Education
Topic	"What sync licensing actually pays composers"
Hook	"Most composers never see this number."
CTA	"Save this. Share it with a producer friend."
Persona	Tunde
Status	☐ Drafted ☐ Designed ☐ Posted

Posting cadence:

: LinkedIn 2x

: SA Composer Spotlight published

Prompt for new conversation:

Build a 4-week content calendar for SyncMaster – Month 1 (Credibility phase). Platform mix: Instagram, Twitter/X, LinkedIn, YouTube. 5 content pillars: Education, Proof, Culture, Behind the scenes, Industry. Target personas: Tunde (Lagos composer, 22-30) and Amara (global music supervisor). Key Month 1 proof point: SA composer who landed music on Showmax – no agent, no label.

For each post include: date, platform, content type, pillar, topic, hook sentence, body summary, CTA, target persona. Build as an interactive HTML file with checkboxes to mark each post as Drafted / Designed / Posted. Status persists in localStorage. Include a progress bar showing % of Month 1 content completed.

Deliverable 1.3 — Copy Bank

What it is: 30–50 pre-written, ready-to-post captions, DM openers, email subject lines, and WhatsApp intro messages. Pull from this bank when you sit down to post — no blank page problem.

Format: Markdown doc with clearly labelled sections.

Sections:

Section	Count	Purpose
Instagram captions (Education)	8	Teach sync licensing basics
Instagram captions (Proof)	5	Composer + placement spotlights
Twitter/X threads (Education)	5	Long-form knowledge threads
Twitter/X single posts	8	Quick takes, hot opinions

LinkedIn posts (Industry)	5	Global supervisor-facing content
Cold DM openers (Tunde)	5	Personalised composer outreach
Cold email subject lines (Amara)	5	Global supervisor cold outreach
WhatsApp intros (Nollywood validation)	3	Warm producer outreach

Prompt for new conversation:

Build a copy bank for SyncMaster – a curated sync licensing platform connecting African composers to global music supervisors.

Write the following:

- 8 Instagram captions on sync licensing education (hooks that stop scroll, 150–200 words, Tunde persona)
- 5 Instagram captions for composer proof/spotlight content
- 5 Twitter/X threads (opening tweet + 5–7 thread tweets each) on: sync licensing explained, why African music is underrepresented globally, what a music supervisor actually looks for, rights clearance basics, how to get your first sync placement
- 8 Twitter/X single-post hot takes (under 280 chars each)
- 5 LinkedIn posts for global music supervisors (300–400 words, professional, insight-driven)
- 5 personalised cold DM openers for Lagos composers on Instagram
- 5 cold email subject lines for global music supervisors
- 3 WhatsApp intro messages for Nollywood producer outreach

Brand voice: dark editorial, confident, not corporate.

We believe African music belongs on global screens.

Output as a clean markdown document with clear section headers.

Layer 2 — Outreach System

When: Week 1 (Composer tracker) · Week 3 (Producer tracker) **Purpose:** A CRM-lite system so no outreach falls through the cracks. Track every person, every message, every response.

Deliverable 2.1 — Composer Outreach Tracker

What it is: A structured tracker for the 40 target composers you'll DM in Month 2. Lives in Airtable (your existing SyncMaster Ops base) or as an interactive HTML table.

Fields:

Field	Type	Notes
Name	Text	Full name
Platform	Select	Instagram / Twitter/X / SoundCloud
Profile URL	URL	Direct link
Location	Text	Lagos / Abuja / Accra etc.
Genre focus	Text	Film score / Afrofusion / Beats
Followers	Number	Social proof signal
Quality signal	Select	High / Medium — professional output only
Outreach date	Date	When first DM sent
Message sent	Long text	Exact message
Response	Select	No response / Interested / Not interested / Applied
Follow-up date	Date	7 days after outreach if no response
Application status	Select	Not sent / Submitted / Vetted / Onboarded / Rejected
Notes	Long text	Anything relevant

Airtable prompt:

In my SyncMaster Ops Airtable base (appFJs0VRsmV5hW0z) create a new table called "Composer Outreach" with these fields: Name (single line text), Platform (single select: Instagram, Twitter/X, SoundCloud, YouTube), Profile URL (URL), Location (single line text), Genre Focus (single line text), Followers (number), Quality Signal (single select: High, Medium), Outreach Date (date), Message Sent (long text), Response (single select: No Response, Interested, Not Interested, Applied), Follow-up Date (date), Application Status (single select: Not Sent, Submitted, Vetted, Onboarded, Rejected), Notes (long text). Add a view called "Active Outreach" filtered to show only records where Response is not "Not Interested".

Deliverable 2.2 — Producer Outreach Tracker

What it is: Same structure as the composer tracker but split into two views — Global track and Nollywood Validation cohort. Critical for keeping the two pipelines separate.

Key difference from composer tracker — split pipeline:

```
flowchart LR
    accTitle: Producer Outreach Pipeline Split
    accDescr: Shows how the producer outreach tracker splits into two parallel tr

    IN["New Producer Contact"]
    G["Global Track\n30 targets\nMusic supervisors\nStudios · Streamers\nAd agenc"]
    N["Nollywood Validation\n20 targets\nNollywood directors\nExecutive producers"]
    GB["Global KPIs\n5 briefs · 2 placements\n1 global referral"]
    NB["Validation KPIs\n5 briefs · 1 placement\n3 data points"]
    OUT["Placement Data\n→ Proof point for\nglobal outreach"]

    IN --> G
    IN --> N
    G --> GB
    N --> NB
    GB --> OUT
    NB --> OUT

    classDef globalStyle fill:#1a0d0d,stroke:#F26B5E,color:#F26B5E
    classDef valStyle fill:#1a1a0d,stroke:#F2C94C,color:#F2C94C
    classDef neutral fill:#0d0d1a,stroke:#787890,color:#C0C0D0

    class G,GB globalStyle
    class N,NB valStyle
    class IN,OUT neutral
```

Additional fields vs. composer tracker:

Field	Type	Notes
Track	Select	Global / Nollywood Validation
Company	Text	Netflix, WPP, Nollywood studio name
Role	Text	Exact job title
Intro source	Text	Who made the warm intro
Budget signal	Select	High / Medium / Unknown

Brief posted	Checkbox	Yes / No
Brief topic	Text	What they're looking for
Commission value	Currency	Estimated placement fee

Deliverable 2.3 — DM + Email Templates

What it is: 7 outreach templates, ready to personalise and send. The single most time-saving deliverable in the entire system. Done once, used hundreds of times.

Templates needed:

#	Template	Channel	Persona
1	Cold DM — composer discovery (Instagram)	Instagram DM	Tunde
2	Cold DM — composer discovery (Twitter/X)	Twitter/X DM	Tunde
3	Cold email — global music supervisor (warm intro)	Email	Amara (global)
4	Cold email — global music supervisor (cold, no intro)	Email	Amara (global)
5	WhatsApp message — Nollywood producer (warm contact)	WhatsApp	Nollywood validation
6	Follow-up message — no response after 7 days	Any	Both
7	Application confirmation — composer accepted	Email	Tunde
8	Brief confirmation — producer brief received	Email	Amara

Prompt for new conversation:

Write 8 outreach templates for SyncMaster — a curated sync licensing platform. Context: we connect African composers to global music supervisors. We have a SA composer who landed music on Showmax (proof point for composers). We have producers with films on Prime Video and Netflix (proof point for global supervisors).

Template 1: Instagram DM to a Lagos composer (22-30, professional, no representation). Personalised, warm, not spammy. Under 150 words. References their specific music style [PLACEHOLDER]. CTA: apply to SyncMaster.

Template 2: Twitter/X DM to a composer. Shorter, more direct. Under 100 words.

Template 3: Email to a global music supervisor (warm intro from a mutual contact). Subject line + body. Lead with the mutual contact. Include the composer roster proof point. CTA: 15-min call or reply with a brief.

Template 4: Cold email to a global music supervisor (no intro). Subject line + body. Lead with pain point (can't find authentic African music that is rights-clear). Under 200 words. CTA: roster PDF or call.

Template 5: WhatsApp message to a Nollywood producer (warm contact, know them personally). Casual, direct. Under 100 words. CTA: post a brief.

Template 6: Follow-up message (7 days, no response). Works across email and DM. Under 60 words. Not pushy.

Template 7: Composer application confirmation email. Professional, warm. Sets expectations for vetting timeline (5 business days).

Template 8: Producer brief confirmation email. Confirms receipt, sets expectations for curation turnaround (48 hours), explains what they will receive.

Brand voice: confident, editorial, not corporate.
We believe African music belongs on global screens.
Output as a clean markdown document.

Layer 3 — Channel Playbooks

When: Before Month 1 launch (profiles) · Before Month 2 (full playbooks) **Purpose:** Channel-specific rules of engagement. What to post, how often, how to engage, how to convert.

Deliverable 3.1 — Instagram Playbook

Sections:

Section	What it covers
Profile optimisation	Bio formula, link-in-bio setup, highlight covers
Content mix	Reels 40% / Carousels 35% / Single posts 15% / Stories 10%
Posting cadence	3x/week minimum from Month 2
Hashtag strategy	Sync licensing tags + Nollywood tags + African music tags
Story strategy	Polls, questions, behind-the-scenes for community
DM sequence	3-step sequence for composer outreach
Engagement rules	Who to follow, comment strategy, collaboration signals

Prompt for new conversation:

Build an Instagram Playbook for SyncMaster – a dark editorial sync licensing platform for African composers and global music supervisors. Include:

1. Profile optimisation: bio formula (who we are + what we do + CTA), link-in-bio setup recommendation, highlight cover categories
2. Content mix recommendation with rationale (Reels vs. carousels vs. single posts vs. Stories)
3. Posting cadence per month (Month 1 credibility, Month 2 composer acquisition, Month 3 producer)
4. 30 hashtags grouped by category: sync licensing, African music, Nollywood, music industry, composer community – with follower counts where known
5. Story strategy: what types of Stories build community vs. what types convert to follows/applications
6. 3-step DM sequence for reaching out to Lagos composers (Day 1 DM, Day 7 follow-up, Day 14 final touch)
7. Engagement rules: accounts to follow, how to comment to build visibility, collaboration signals to watch for

Output as a clean markdown playbook I can reference daily.

Deliverable 3.2 — LinkedIn Playbook

Why this matters more than any other channel for the global supervisor goal:

```
flowchart LR
    accTitle: LinkedIn Funnel for Global Music Supervisors
    accDescr: Shows the LinkedIn strategy funnel from profile optimisation through

    P["Optimised founder\npersonal profile"]
    C["Thought leadership\ncontent 2x/week"]
    A["Paid ads – job title\ntargeting globally"]
    CON["Connection requests\nto music supervisors"]
    ENG["Engagement on\ntheir content"]
    MSG["Warm message\n+ roster share"]
    BRIEF["Brief submission\nor call booked"]

    P --> C
    P --> CON
    C --> ENG
    A --> CON
    CON --> ENG
    ENG --> MSG
    MSG --> BRIEF

    classDef primary fill:#1a0d1a,stroke:#9B72F2,color:#9B72F2
    classDef action fill:#0d1a1a,stroke:#38D1B5,color:#38D1B5
    classDef output fill:#1a0d0d,stroke:#F26B5E,color:#F26B5E

    class P,C primary
    class A,CON,ENG,MSG action
    class BRIEF output
```

Key insight: Your personal founder profile matters more than the SyncMaster company page for B2B outreach. Music supervisors trust people, not brands.

Ad targeting spec (for Month 3):

Parameter	Value
Job titles	"Music Supervisor", "Head of Music", "Sync Licensing Manager", "Creative Director", "Music and Sound Director"
Companies	Netflix, Amazon Studios, Apple TV+, Disney+, Hulu, WPP, Publicis Groupe, Dentsu, Ogilvy, production companies
Geography	US, UK, Canada, Australia, Germany, France

Budget	\$700–1,200 over 30 days
CTA	"Download our composer roster" or "Post a sync brief"

Prompt for new conversation:

Build a LinkedIn Playbook for SyncMaster's founder – we are a curated sync licensing platform connecting African composers to global music supervisors. The founder's personal profile is the primary channel, not the company page.

Include:

1. Personal profile optimisation: headline formula, about section structure, featured section strategy, experience framing for a marketplace founder
2. Content strategy: 2 post types per week, format recommendations (text posts vs. carousels vs. documents), topics that resonate with music supervisors and composers simultaneously
3. Connection strategy: exact search filters to find global music supervisors, personalised connection note templates (under 300 chars), who to prioritise
4. Engagement strategy: accounts and hashtags to follow, how to comment on music supervisor content to build visibility before pitching
5. LinkedIn Ads setup guide: exact job title targeting, company targeting, geographic targeting, budget allocation, ad copy recommendation, CTA options
6. Message sequence: after connecting, 3-step message sequence over 14 days (Day 1, Day 5, Day 14)

Output as a clean markdown playbook.

Deliverable 3.3 — Twitter/X Playbook

Prompt for new conversation:

Build a Twitter/X Playbook for SyncMaster – a curated sync licensing platform for African composers and global music supervisors. Include:

1. Account positioning: bio formula, pinned tweet strategy, header image direction

2. Content strategy: tweet types that build following in the sync licensing + African music space (threads vs. hot takes vs. quote tweets vs. replies)
3. Thread strategy: 5 thread topic ideas with full outlines – these are SyncMaster's highest-reach format
4. Engagement map: 20 accounts to follow and engage with (music supervisors, African music accounts, sync licensing educators, industry journalists)
5. Hashtag strategy: which hashtags to use and avoid
6. Posting cadence: frequency per phase (Month 1/2/3)
7. DM strategy for reaching composers on Twitter/X

Output as a clean markdown playbook.

Deliverable 3.4 — WhatsApp Playbook

Prompt for new conversation:

Build a WhatsApp Outreach Playbook for SyncMaster – specifically for the Nollywood validation cohort (Month 3). We are using Nollywood producers as an early validation channel, not our primary market. Global music supervisors are the main target.

Include:

1. How to identify the right Nollywood producers to contact via existing network
2. How to open a WhatsApp conversation without it feeling like spam – warm contact protocol
3. 3-message sequence: intro, brief invitation, follow-up (with exact message templates)
4. How to track responses in Airtable
5. When to move from WhatsApp to email or a call
6. What "success" looks like for the Nollywood validation cohort (5 briefs = enough data)
7. What data to capture from each interaction to feed into global outreach proof points

Output as a clean markdown playbook.

When: End of Month 1 (build) · Weekly thereafter (use) **Purpose:** Know what's working before you double down. The roadmap is a plan — reality will diverge. Weekly measurement keeps you calibrated.

Deliverable 4.1 — Metrics Dashboard

What it is: A single-view weekly snapshot of all KPIs. Extends the Execution Tracker (Slide 4) or lives in Airtable.

Full KPI set:

```
mindmap
  accTitle: SyncMaster Marketing KPI Tree
  accDescr: Hierarchical view of all marketing KPIs organised by funnel stage f

  root(("SyncMaster\nKPIs"))
    Awareness
      Social followers total
      Follower growth week-over-week
      Post reach and impressions
      Email list size
      Email signups per week
    Acquisition
      Composer DMs sent
      Composer DM response rate
      Composer applications received
      Global supervisor contacts made
      Nollywood producer contacts made
    Activation
      Composers vetted and onboarded
      Briefs posted globally
      Briefs posted Nollywood validation
      Time to first brief after contact
    Revenue
      Placements in pipeline
      Commission value in pipeline
      First placement date
      Revenue this month
    Retention
      Composers with 2+ submissions
      Producers who posted 2+ briefs
      Net promoter score informal
```

Prompt for new conversation:

Build a weekly metrics dashboard for SyncMaster – an interactive HTML file. It should track these KPI categories: Awareness (followers, email list), Acquisition (outreach, applications, contacts), Activation (composers onboarded, briefs posted), Revenue (placements, commission).

Split acquisition and activation KPIs into two tracks: Global (music supervisors) and Nollywood Validation.

The dashboard should:

- Allow weekly data entry (click to edit any number)
- Show week-over-week delta with up/down arrows and colour coding (green = up, red = down)
- Show a sparkline trend for each metric (last 4 weeks)
- Persist all data in localStorage
- Have an "Add Week" button to log a new week's data
- Export to CSV on button click
- Dark editorial aesthetic matching SyncMaster brand: background #0C0C10, accent gold #F2C94C, Syne + DM Sans fonts

Output as a single self-contained HTML file.

Deliverable 4.2 — Weekly Review Template

What it is: A 15-minute Friday ritual. A structured markdown template you fill in weekly to stay calibrated against the roadmap.

Structure:

SYNCMaster — WEEK [N] REVIEW

Date: [Friday date]

Phase: [Month 1 Credibility / Month 2 Composer / Month 3 Producer]

— NORTH STAR CHECK —

Email signups this week: [X] (target pace: ~12/week)

Composer applications: [X]

Global supervisors contacted: [X]

Briefs received: [X]

— WHAT WORKED —

[1 thing that worked better than expected]

[Why it worked]
[How to do more of it next week]

— WHAT DIDN'T —
[1 thing that underperformed]
[Hypothesis for why]
[Decision: kill / pause / adjust]

— DOUBLE DOWN —
[One thing to do more of next week]

— NEXT WEEK PRIORITY —
[Single most important task for next week]
[Why this task, not another]

— OPEN QUESTIONS —
[Anything unresolved that needs a decision]

Prompt for new conversation:

Build a Weekly Review Template for SyncMaster as an interactive HTML file. It should function as a structured 15-minute Friday review ritual.

Sections: North Star Metrics check (pre-filled with targets from the 90-day plan), What Worked, What Didn't, Double Down, Next Week Priority, Open Questions.

Features:

- Each week's review saved automatically to localStorage with the date as key
- A sidebar showing all previous weeks (click to view any past review)
- A "New Week" button to start a fresh review
- Export all reviews as a single markdown file
- Auto-calculate whether you are ahead or behind pace on each north star metric based on 90-day targets
- Dark editorial aesthetic: #0C0C10 bg, #F2C94C gold, Syne + DM Sans

Output as a single self-contained HTML file.

Layer 5 — Growth Loops

When: After first placement (trigger: Month 3+) **Purpose:** Turn every placement into the next placement. Systematise the proof → referral → acquisition loop.

Deliverable 5.1 — Case Study Template

What it is: A repeatable format for documenting every placement as a proof point. One real case study outperforms 100 cold DMs.

Structure:

Section	Content	Use
Composer background	Who they are, where they're from, no prior placement	Tunde identification
The brief	What the producer/supervisor needed	Amara identification
The submission	How SyncMaster curated and delivered	Process proof
The placement	Where the music landed, what it was used for	Outcome proof
The impact	What it meant for the composer + the producer	Emotional hook
The quote	One line from composer + one from producer	Social proof
The numbers	Fee, timeline, rights terms	Commercial proof

Formats to produce from one case study:

- Long-form LinkedIn article (500 words)
- Instagram carousel (6 slides)
- Twitter/X thread (7 tweets)
- Cold email proof point paragraph (2 sentences)
- Website testimonial block

Prompt for new conversation:

Build a Case Study Template system for SyncMaster – a sync licensing platform. The template should capture one placement story and output it in 5 formats:

Input: composer background, brief description, curation process, placement outcome, composer quote, producer quote, fee range, timeline, rights terms.

Outputs (all generated from the same input):

1. Long-form LinkedIn article (500 words, thought leadership framing)
2. Instagram carousel script (6 slides, hook → story → proof → CTA)
3. Twitter/X thread (7 tweets, opens with the outcome, threads the story back)
4. Cold email proof paragraph (2 sentences, usable in outreach templates)
5. Website testimonial block (headline + quote + attribution)

Build as an interactive HTML tool:

- Form to input the case study details
- Generate all 5 formats on click
- Copy button for each format
- Dark editorial aesthetic matching SyncMaster brand

Output as a single self-contained HTML file.

Deliverable 5.2 — Referral System

What it is: A simple mechanism for turning happy composers and producers into referral sources. V1 is manual. V2 is structured.

V1 (manual — immediate):

- After every onboarded composer: "Who else in your network should be on SyncMaster?"
- After every completed brief: "Who else at your company or network is sourcing music?"
- After every placement: "Would you be willing to introduce us to one global supervisor you know?"

V2 (structured — Month 3+):

sequenceDiagram

accTitle: SyncMaster V2 Referral Sequence

accDescr: Shows the automated referral sequence triggered after a successful

participant P as Placement Confirmed

participant SM as SyncMaster

participant C as Composer/Producer

participant R as Referred Contact

P->>SM: Trigger referral sequence

SM->>C: Day 1 – Thank you + placement announcement email

SM->>C: Day 3 – "Who else should know about us?" email

C->>R: Warm intro made

R->>SM: Signs up or posts brief

SM->>C: Acknowledgment + credit note (V2 reward TBD)

SM->>R: Onboarding sequence begins

Prompt for new conversation:

Design a Referral System for SyncMaster V1 and V2.

V1 (manual, immediate): Write 5 referral ask scripts – one for after a composer is onboarded, one after a producer posts their first brief, one after a placement is confirmed (for the composer), one after a placement is confirmed (for the producer), one for a cold ask to a global music supervisor who hasn't posted a brief yet.

V2 (structured, Month 3+): Design the referral email sequence triggered after a successful placement. 3 emails over 7 days. Include subject lines and body copy.

Also write: a referral tracking spreadsheet structure (Airtable fields) to track who referred who and whether the referral converted.

Brand voice: warm but professional.
We are grateful but not sycophantic.
Output as a clean markdown document.

Deliverable 5.3 — PR + Press Strategy

What it is: Getting SyncMaster mentioned in music industry and African tech press. Only pursue this after 3+ placements — you need receipts before approaching press.

Target publications:

Publication	Audience	Angle
Music Week	UK music industry	African sync market opportunity
Variety	Hollywood / global entertainment	Lagos composers going global
Billboard	US music industry	African music + streaming platforms
TechCabal	African tech ecosystem	Lagos startup in global sync market
Techpoint Africa	African tech	Founder story + product traction
This Is Africa	Pan-African	Cultural + commercial story
Sync Summit blog	Music supervisors	Platform built for supervisors

Pitch angle (after 3 placements):

"The Lagos startup that placed African composers on Netflix, Prime Video, and Showmax — without a label, without an agent, and with full rights documentation."

Prompt for new conversation:

Build a PR + Press Strategy for SyncMaster — a curated sync licensing platform that connects African composers to global music supervisors. We will have 3+ placements on streaming platforms (Showmax, Prime Video, Netflix) before approaching press.

Deliver:

1. Media target list: 8-10 publications with audience description, contact approach, and best angle for each
2. Press release template: structured for a "first placements" announcement. Include headline formula, lede, body structure, quote placeholders, boilerplate
3. Pitch email template: short (under 200 words) personalised pitch to a music journalist.
Two versions — trade press (Music Week, Billboard) and tech/African press (TechCabal, Techpoint)
4. Founder op-ed outline: 600-word article for

- LinkedIn or a trade publication titled "Why Global Music Supervisors Are Missing Africa's Best Composers" – outline with section headers and key points per section
5. Story packaging guide: how to turn one placement into press-ready assets (quotes, data points, narrative arc)

Output as a clean markdown document.

Quick Reference — Copy-Paste Prompts by Priority

Use this section to start a new conversation for any deliverable. Each prompt is self-contained — no prior context needed.

Immediate (Week 0 — do these first)

Context Block for New Conversations

Copy this into the top of any new conversation to restore full context without re-explaining.

SYNCMaster CONTEXT BLOCK

Product: SyncMaster – a curated sync licensing platform connecting African composers to global music supervisors at studios, streamers (Netflix, Prime Video, Apple TV+, Disney+), and ad agencies (WPP, Publicis, Dentsu).

Model: 15-20% commission on placements. No placement = no fee. Manual concierge in V1.

End market: Global music supervisors. Nollywood = early validation beachhead only.

Personas:

- Tunde: Lagos-based composer, 22-30, self-taught or music school, produces beats + film scores, no representation, online on IG/Twitter/YouTube/SoundCloud
- Amara: Global music supervisor or senior producer at a studio/streamer/ad agency, reaches via LinkedIn, events, WhatsApp warm intros

Proof points already in network:

- SA composer with music placed on Showmax (no agent, no label)
- Producers with films on Prime Video and Netflix

90-day sprint goals:

- Month 1: Credibility (50-100 email signups, inbound DMs)
- Month 2: 20 vetted composers onboarded
- Month 3: 10 briefs (5 global + 5 Nollywood validation), 3 placements, first commission

What's already built: Interactive HTML deck (Strategy, Canvas, Roadmap, Execution Tracker) – deployed on Netlify.

Tech stack: Next.js, Supabase, Vercel, Resend, AWS Bedrock (AI layer). Airtable Ops base: appFJs0VRsmV5hW0z.

Brand voice: Dark editorial, confident, not corporate.

African music belongs on global screens.
