

SyncMaster — Content Pillars Guide

Brand voice: Dark editorial. Confident. Not corporate. **Mission:** African music belongs on global screens. **Personas:** Tunde (Lagos composer, 22–30, no representation) · Amara (global music supervisor at studio, streamer, or ad agency)

Pillar Distribution (Month 1)

Pillar	Weight	Rationale
Education	35%	Build trust with Tunde before asking for anything
Proof	25%	Credibility with both Tunde and Amara — show, don't tell
Behind the Scenes	20%	Founder authenticity; builds early community
Culture	15%	Differentiation — no other sync platform owns this angle
Industry	5%	Signals authority to Amara; grows slowly as platform matures

Pillar 1 — Education

Definition

Demystify sync licensing for African composers who have never had access to this knowledge. Most of Tunde’s peers don’t know what a sync is, what a brief pays, or what rights clearance means. SyncMaster becomes the trusted educator before it becomes the platform. Every educational post builds goodwill, trust, and inbound applications.

Primary persona: Tunde **Tone:** Informative, accessible, no jargon without explanation **Goal:** Position SyncMaster as the most knowledgeable voice on sync licensing for African composers

10 Post Topic Ideas

1. **What is sync licensing?** — Plain-English explainer with real-world examples (that scene in a Netflix show, the ad you heard last week)
 2. **What does a sync placement actually pay?** — Breakdown of fee tiers: YouTube ad vs. Nollywood film vs. Netflix series vs. global ad campaign
 3. **Master vs. sync licence — what's the difference?** — Why you need both cleared before any placement happens
 4. **What a music supervisor actually does all day** — Humanise the buyer; show Tunde who he's writing for
 5. **Why your SoundCloud link isn't enough** — What you actually need to submit: stems, BPM, mood tags, ISRC, rights confirmation
 6. **The brief breakdown** — Anatomy of a real sync brief: mood, tempo, instrumentation, budget, exclusivity window
 7. **5 reasons African music gets rejected from global briefs** — Not quality. Rights gaps, poor metadata, wrong format, no stems
 8. **What is a one-stop clearance?** — Why supervisors love it and how African composers can offer it
 9. **ISRC codes explained** — What they are, how to get one, why every track you release needs one
 10. **How a placement becomes a credit, a cheque, and a career** — The full journey from brief to payment to IMDb credit
-

Hook Sentences

Instagram

- "Nobody told you this in music school. Here's how sync licensing actually works.  "
- "A Lagos composer just earned more from one Netflix scene than from 6 months of streams. Here's why."
- "The brief said: 2 minutes, orchestral, hopeful, Afrofusion influence. Here's what that actually means."

Twitter/X

- “Most African composers are one sync placement away from a career-defining moment. Most don’t know how to get there. Thread 🧵 ”
- “A sync fee isn’t a stream. It’s a negotiated licence. Here’s what that means for your music.”
- “The music supervisor didn’t reject your track because it wasn’t good. They rejected it because the rights weren’t clear.”

LinkedIn

- “The global sync market is worth over \$500M annually. African music has a fraction of the representation it deserves — not because of quality, but because of access. Here’s what that access gap looks like in practice.”
- “Music supervisors at Netflix, Amazon, and Ogilvy aren’t looking for the best music. They’re looking for the best music they can clear quickly. Understanding this changes everything.”

Content-Type Recommendations

Format	Platform	Why
Carousel (5–8 slides)	Instagram	Dense knowledge in scrollable format; high saves
Reel (30–45 sec)	Instagram	Hook → one concept → CTA; drives discovery
Thread (7–10 tweets)	Twitter/X	Depth and shareability; best for complex topics
Article (400–600 words)	LinkedIn	Authority-building with Amara’s network
Story (poll + swipe up)	Instagram	Lightweight; use for testing what Tunde wants to learn

Pillar 2 — Proof

Definition

Every placement, every onboarded composer, every brief received is a proof point. Use it. One real case study is worth more than 100 aspirational posts. This pillar converts sceptics on both sides — Tunde needs to believe placements are real; Amara needs to believe the

composer quality is real. Proof posts are the highest-conversion content in the entire system.

Primary persona: Both Tunde and Amara **Tone:** Aspirational, credible, specific — numbers and names where possible **Goal:** Build social proof that makes applying and briefing feel like obvious decisions

10 Post Topic Ideas

1. **SA composer Showmax placement story** — Your existing proof point; told as a case study with composer background, brief, submission, placement, outcome
 2. **Composer spotlight series** — “Meet [Name]. Lagos-based. No representation. Just placed on [platform].” One per onboarded composer
 3. **The brief to placement timeline** — Real timeline from brief received to track selected to placement confirmed
 4. **Rights-cleared in 48 hours** — Document the curation turnaround to show producers what they’re buying
 5. **Before SyncMaster vs. after SyncMaster** — Composer perspective on what changed for their career
 6. **Producer brief results reveal** — “We received a brief for an orchestral Afrofusion track. Here’s what we sent back in 48 hours.”
 7. **Placement announcement post** — Clean, confident, editorial format: Composer · Platform · Type of placement
 8. **Composer application milestone** — “20 applications. 6 vetted. Here’s what we look for.”
 9. **The vetting process** — What it actually takes to get onto SyncMaster’s roster; shows Amara the quality bar
 10. **First commission milestone** — Founder post when the first fee is paid; human, honest, builds momentum
-

Hook Sentences

Instagram

- “No label. No agent. No prior placement. Then a brief arrived. Here’s what happened

next.”

- “We gave a Nollywood producer 5 tracks in 48 hours. All rights-cleared. All original. All African.”
- “This is what a placement announcement looks like on SyncMaster. ❤️”

Twitter/X

- “A Lagos composer just had music placed on a streaming platform with 50M+ subscribers. No label. No publisher. Just talent, documentation, and the right brief.”
- “We sent 5 curated tracks to a producer. She picked one. The composer gets a sync credit and a fee. This is what the pipeline looks like.”
- “Placement confirmed. Rights cleared. Invoice sent. This is what we’re building.”

LinkedIn

- “One of our composers just had music placed on a major streaming platform. No publishing deal. No representation. Just exceptional music, clean rights documentation, and a brief that matched his sound. This is the gap we’re closing.”
- “We received a brief from a production company last week: Afrofusion, 90 BPM, hopeful, 2 mins, one-stop clearance required. We returned 5 curated options in 31 hours. The producer has never worked this fast. That’s the product.”

Content-Type Recommendations

Format	Platform	Why
Carousel (6 slides)	Instagram	Case study format; hook → story → outcome → CTA
Single image post	Instagram	Placement announcement; clean, editorial, shareable
Thread	Twitter/X	Full case study told chronologically
Article	LinkedIn	Long-form case study for Amara’s network
Story highlight	Instagram	Archive all proof in a permanent “Placements” highlight

Pillar 3 — Culture

Definition

SyncMaster has a point of view that no other sync platform has: African music is globally underrepresented, and that is a creative and commercial failure, not just a diversity issue. This pillar owns that conversation. It speaks to the cultural significance of what's being built — African sounds on global screens — without being preachy. It attracts composers who want to be part of a movement and supervisors who want to be ahead of the curve.

Primary persona: Both, but strongest with Tunde's identity and Amara's cultural curiosity

Tone: Proud, editorial, forward-looking — never defensive **Goal:** Give SyncMaster a cultural identity that transcends "marketplace"; build belonging

10 Post Topic Ideas

1. **African music on global screens — a timeline** — From Fela Kuti to Burna Boy to Afrobeats in Marvel trailers; show the trajectory
 2. **Why the sync industry is sleeping on African instrumentation** — Specific textures (talking drum, kora, thumb piano) that supervisors are actively searching for
 3. **The Afrobeats crossover isn't new — it's been building for 30 years** — Historical context; positions SyncMaster as riding a wave, not creating one
 4. **What Lagos sounds like at 3am** — Evocative, editorial content that makes the music feel cinematic
 5. **5 African film scores that should have won international awards** — Cultural criticism; builds authority and community
 6. **The genre labels don't fit** — Why "Afrobeats" undersells the diversity of what African composers actually produce
 7. **Afrofusion, Highlife, Amapiano, Genge, Bongo — and why global supervisors don't know the difference yet** — Educational but cultural; positions SyncMaster as the guide
 8. **African composers who broke through without a Western label** — Celebration of self-determination; aspirational for Tunde
 9. **What African music adds to a scene that Western scores can't** — Creative argument for diversity of sound in film/TV
 10. **The continent has 54 countries. The music industry treats it like one.** — Hot take that sparks conversation and shares
-

Hook Sentences

Instagram

- “African music has been in global films for decades. African composers have been invisible for just as long. That ends now.”
- “There are sounds coming out of Lagos right now that no Western composer can replicate. The world just doesn’t know where to find them.”
- “Afrobeats is a genre. African music is a continent of sound. Here’s why that distinction matters.”

Twitter/X

- “The talking drum has been in film scores since the 70s. In 2024, African composers are still the last people in the room when those briefs are written.”
- “Amapiano, Bongo Flava, Highlife, Genge. These are not subgenres of each other. Global supervisors are starting to understand this.”
- “African music doesn’t need a Western endorsement to be world-class. It needs a platform that already knows that.”

LinkedIn

- “The global appetite for African sound is real — driven by streaming, diaspora audiences, and a generation of supervisors who grew up on diverse media. The infrastructure to connect that appetite to the composers creating the music has not kept pace. That’s the problem SyncMaster exists to solve.”
- “Every major streaming platform has content set in Africa or featuring African stories. The music budget often doesn’t reflect that. This is changing — and the composers who are ready will benefit most.”

Content-Type Recommendations

Format	Platform	Why
Reel (45–60 sec)	Instagram	Evocative, cinematic content works here; music + visuals
Carousel	Instagram	“5 things global supervisors don’t know about African music”

Thread	Twitter/X	Cultural argument threads get shared widely in music communities
Single post (strong opinion)	Twitter/X	Hot takes on culture drive engagement and follows
Article	LinkedIn	Thought leadership for Amara; positions founder as a voice

Pillar 4 — Behind the Scenes

Definition

SyncMaster is a founder-led business in its earliest stage. Building in public is a competitive advantage. Showing the process — vetting a composer, receiving a brief, matching a track — makes the platform feel real before it's fully built. It also builds the founder's personal brand, which matters more than the company brand at this stage for B2B trust. Authenticity is the differentiator.

Primary persona: Both — Tunde wants to see the process; Amara wants to see the operator **Tone:** Personal, honest, direct — no performance, no hype **Goal:** Build trust through transparency; attract early adopters on both sides

10 Post Topic Ideas

1. **Why I'm building SyncMaster** — Founder origin story; the moment the gap became undeniable
2. **What a vetting session looks like** — Real process: listening to a submission, checking rights docs, making the call
3. **The first brief we ever received** — What it was, what we sent back, what happened
4. **Building a sync platform from Lagos with no external funding** — Honest about the constraints; aspirational about the vision
5. **How we match a composer to a brief** — The decision framework; what makes a track right for a brief
6. **Week 3 of building — what's working, what's not** — Weekly transparency post; builds follow-through and accountability

7. **What we look for when vetting a composer** — 5 criteria; shows Tunde what to aim for, shows Amara the quality bar
 8. **The rejection email we had to write** — Honest, empathetic; shows character and standards
 9. **Our first composer onboarded — here's their story** — Personal, specific, celebrates the milestone
 10. **What the platform looks like right now vs. what it will be** — Honest roadmap; builds excitement without overpromising
-

Hook Sentences

Instagram

- "Here's what happened the first time we received a real brief. We had 48 hours."
- "I'm building a sync platform for African composers. This is week 4. Here's what I've learned."
- "We rejected a submission last week. Here's exactly why — and what would have made it a yes."

Twitter/X

- "Building a curated sync platform in Lagos. No playbook for this. Writing it as we go. Here's week 3."
- "We received our first producer brief this week. African music, 90 seconds, hopeful tone, one-stop clearance required. Here's how we matched it."
- "The vetting call took 45 minutes. The rejection email took 2 hours to write. Standards have a cost."

LinkedIn

- "I'm building SyncMaster because I watched technically exceptional African composers get passed over for sync placements — not because their music wasn't good enough, but because no one had built the infrastructure to get it in front of the right people. This is week one of changing that."
- "Three things I've learned about building a music marketplace in the first 30 days: (1) trust is the product before the platform is, (2) curation is harder than technology, (3) composers don't need more exposure — they need representation."

Content-Type Recommendations

Format	Platform	Why
Reel (30 sec, lo-fi)	Instagram	Authentic, not polished; resonates more than produced content
Story series	Instagram	Real-time updates; low-effort, high-authenticity
Single text post	Twitter/X	Founder reflections work as plain text; no design needed
Thread	Twitter/X	"Building in public" threads attract followers and press
Article	LinkedIn	Long-form founder story works for B2B trust-building

Pillar 5 — Industry

Definition

SyncMaster has an informed opinion on the sync licensing industry — not just as a platform, but as a voice. This pillar shares industry news, market data, and commentary that makes Amara want to follow because SyncMaster is giving her useful intelligence, not just selling to her. It also signals to Tunde that his work is entering a real, structured, global industry — not an informal network.

Primary persona: Amara (global music supervisor) **Tone:** Sharp, authoritative, analytical — measured, not inflammatory **Goal:** Build credibility with the demand side; attract inbound from supervisors

10 Post Topic Ideas

1. **The sync market by the numbers** — Global market size, growth rate, streaming's impact on sync fees; sourced and cited
2. **How streaming changed sync fees** — SVOD vs. AVOD vs. theatrical; what a supervisor's budget looks like in 2024
3. **What music supervisors are actually searching for right now** — Based on brief patterns; real intelligence

4. **The rise of non-Western music in global advertising** — Market trend; Amapiano in UK ads, Afrobeats in US campaigns
 5. **Why the old sync model is breaking** — Libraries are too big, turnaround is too slow, rights are too messy; SyncMaster's positioning
 6. **MIDEM, Sync Summit, Music Week — what actually matters at these events** — Useful for Amara; positions founder as someone in the room
 7. **The rights clearance crisis in global production** — Why supervisors spend 40% of their time on admin that shouldn't exist
 8. **Streaming platforms commissioning African content — what this means for sync** — Netflix Africa, Prime Video Nigeria, Showmax; real briefs are coming
 9. **The brief volume problem** — Why music supervisors receive hundreds of submissions and select from five; the case for curation
 10. **African music in global advertising — a case study roundup** — Specific campaigns that used African sound; shows the commercial appetite
-

Hook Sentences

Instagram

- "The global sync market is worth \$500M+. African composers earn a fraction of their share. Here's why that's changing."
- "Netflix is commissioning 40+ African originals this year. Every single one needs a score. The briefs are coming."
- "Music supervisors don't have a music problem. They have a discovery and clearance problem."

Twitter/X

- "Streaming grew sync revenue by 35% in 5 years. African composers have not seen proportional benefit. That asymmetry is the entire business case for SyncMaster."
- "A music supervisor at a major streamer told me they spend more time on rights admin than on actual music selection. That's not a workflow problem. It's a market structure problem."
- "Afrobeats is in every major ad campaign. The composers getting paid for it are mostly not African. The catalogue is there. The infrastructure isn't."

LinkedIn

- “Global streaming platforms are accelerating African content production. Netflix, Prime Video, and Apple TV+ have all announced significant slate expansions for African-produced content. The briefs that follow those productions will require African music — and the supervisors who close those deals will need a faster, cleaner way to find it.”
 - “The sync licensing industry has a rights clearance problem that costs production companies time and money on every single placement. The platforms that will win in the next 10 years are the ones that make clearance a feature, not an afterthought. This is what we built SyncMaster around.”
-

Content-Type Recommendations

Format	Platform	Why
Carousel (data-driven)	Instagram	Market stats in visual format; saved and shared
Single post (opinion)	Twitter/X	Short, sharp industry takes; builds authority quickly
Article	LinkedIn	Long-form analysis; this is Amara’s primary content format
Thread	Twitter/X	Industry deep-dives; attracts supervisors and journalists
Story (news reaction)	Instagram	React to industry news quickly; shows you’re in the conversation

Quick Reference — Pillar Decision Matrix

Use this when you’re planning content and need to decide which pillar a post belongs to:

If the post answers...	Pillar
“How does sync licensing work?”	Education
“Is SyncMaster real? Does it work?”	Proof

"Why does African music matter globally?"	Culture
"What is SyncMaster actually doing right now?"	Behind the Scenes
"What's happening in the sync industry?"	Industry

Platform-First Matrix

Platform	Primary pillars	Secondary pillars	Post frequency (Month 1)
Instagram	Education, Proof, Culture	Behind the Scenes	2x/week
Twitter/X	Education, Industry, Behind the Scenes	Culture	3x/week
LinkedIn	Industry, Proof	Education	1x/week
YouTube	Education, Proof	Culture	1x/month

SyncMaster Content Pillars Guide v1.0 — Layer 1 of 5 Next: Content Calendar (Month 1) → Copy Bank → Outreach Templates
